ABSTRACT

Agent-Simulation is a tool to know about a could-be-world. Also, Gaming-Simulation is a language to communicate the future. In this talk, I will discuss a new approach to understand complex socio-technical systems through both concepts. We start basic features on complex and/or complicated socio-technical systems, which address both technical and social issues with human decision- making processes. Then, we explain the importance of new ways of system thinking with human-in-the-loop manners. For the purpose, we propose a methodology to amalgamate agent- and gaming-simulation.

Outline

- Introduction
- Difficulties of Socio-Technical Problems
- What is Agent-Simulation
- What is Gaming-Simulation
- Applying AI/ML for Social System Implementation
- Our Challenge to Socio-Technical Problems
- Concluding Remarks

Takao TERANO, Small Personal History

- 1978: Graduated Master Course Information Engineering, Tokyo University: OR & Numerical Analysis
- 1978~1989: Central Research Institute of Electric Power Industry (CRIEPI) , Information System R&D
1980's in the 2-nd AI Era: Member of ICOT-WG, R&D for Expert Systems for Electric Power Industries
- 1990~2004: Grad. Sch. Sys. Mng. (GSSM), Tsukuba University, Japan; Assistant, Associate, & Full Professor
Research and Education for Business People
AI, Decision Making, Gaming Simulation, Social Simulation
(1991: PhD, Tokyo Institute of Technology; 2009: Prof. Emeritus, Tsukuba Univ.)
- 2004~2018 Professor, Tokyo Institute of Technology, Japan
Social Simulation, Service Sciences, Knowledge Systems, Evolutionary Computation
(2018, Prof. Emeritus, Tokyo Institute of Technology)
- 2018~2018 Professor, Chiba University of Commerce, Japan
AI & System Science, Social Systems; Technical Advisor, MIRAI Relations Co. LTD.
- Academic Societies: JSAI, JASMIN, JASI, JIPS, SICE, JSOR, PM, Evol. Econ., JASAG, TRAFST, PAAA

Recent Development of Computers

- In 1977: Deployment of Apple II and Boeing 747
 - Apple II
 - 4 k Byte RAM
 - 1 m Hz CPU Speed
 - JPN 350, 000
 - B747:
 - 300 t Loading Capacity
 - 1,000 km/h Speed
 - JPN 10,000 M (~ Price of a Super Computer at the day)
- In 2018:
 - Apples iMAC Pro
 - 128 G byte RAM
 - 18 Core Xeon Processors; 3.2GHz CPU Speed / One Processor
 - JPN 1.50 M
 - If the Performance of B747 would show the same advancement...
 - 30,000 M t Loading Capacity
 - 60 M km/h Speed (~ Much faster then the Speed of Light!)
 - JPN 40,000 M

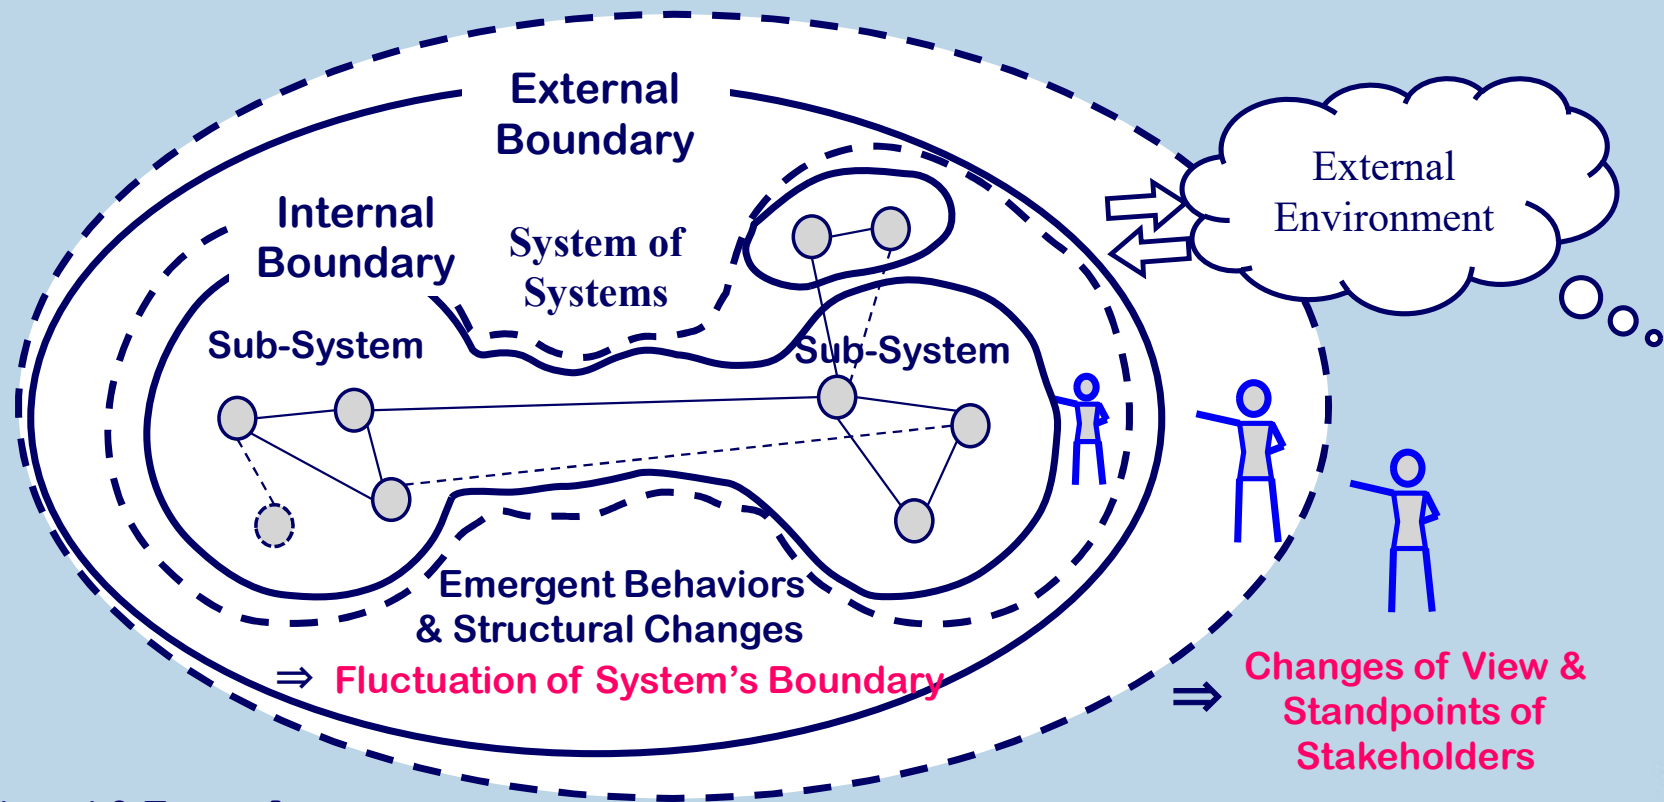

Why Socio-Technical System is Difficult?

- In Problem Formulation:
 - Conflicts among Stakeholders' Concerns
 - Global and/or Inter-Cultural
 - Complex Adaptive and/or Learning Behaviors of Agents
 - Formation of Social Disciplines
 - Long Term Changes
 - Effects of Unpredictable Technology Changes
- In Technology and Systems
 - Methodologies on Design, Analysis, and Evaluation of the Target System
 - No Direct Control against Individuals and Firms
 - Cooperation of Technology and Systems

Fluctuation of Boundary and Stake-Holders of Socio-Technical Problems

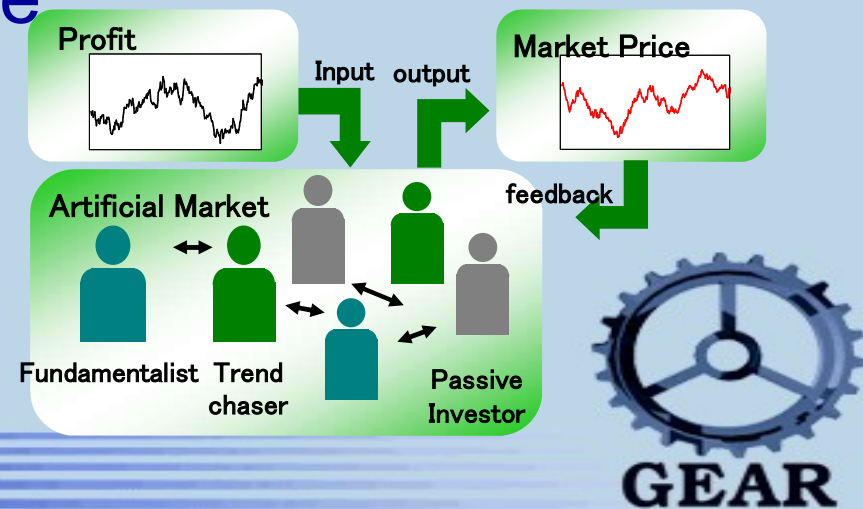

[Kunigami & Terano]

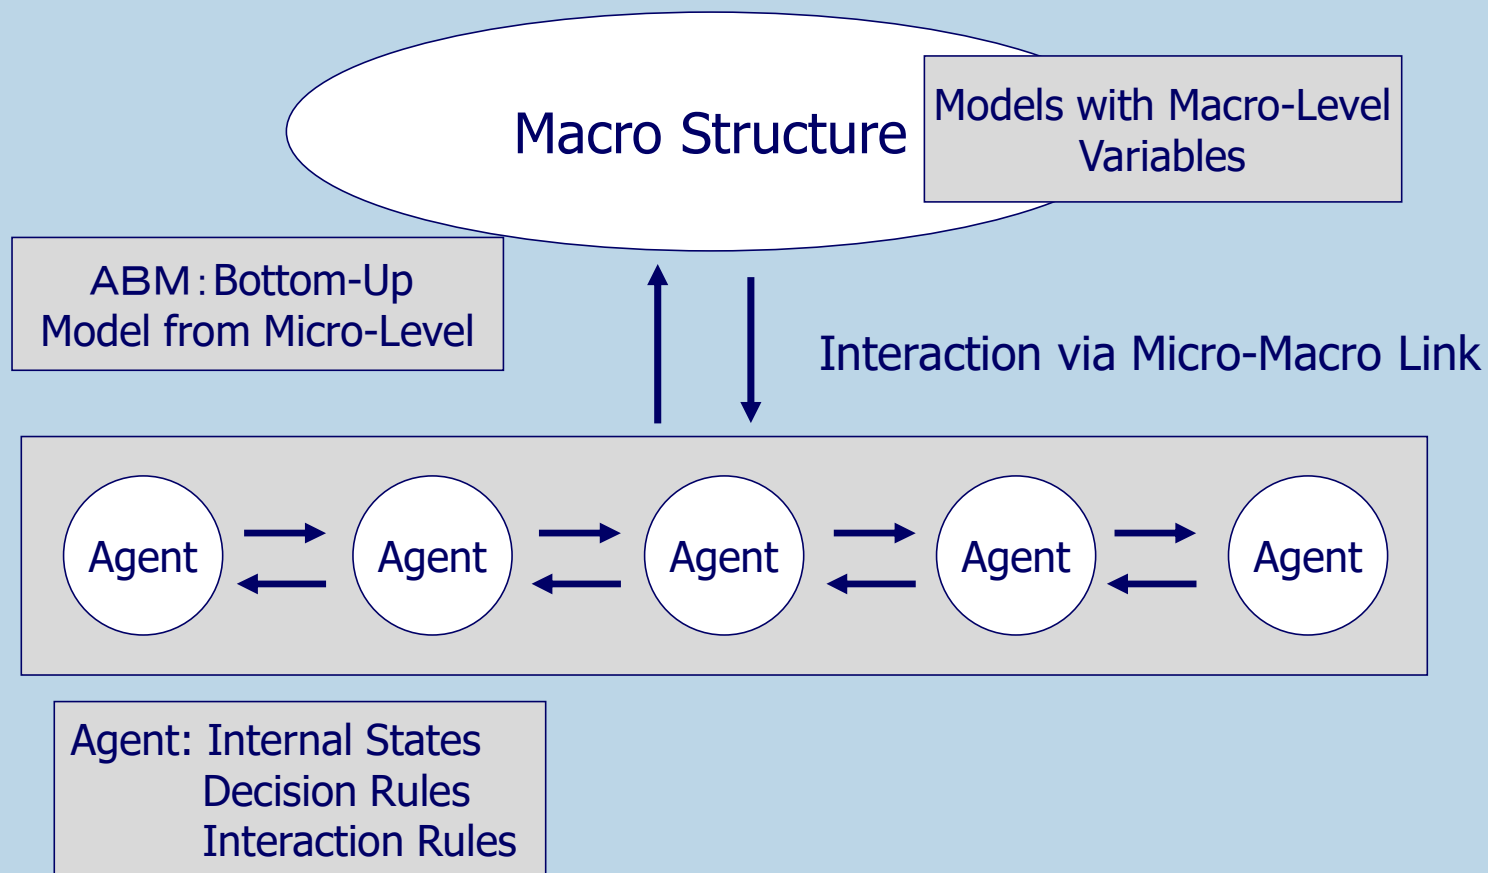

Agent-Based Modeling/Simulation

- Uncovering Activities of Bounded Rational Agents
- No experiments have been allowed in a real world
- Agent Based Modeling enables organizational experiments that is impossible otherwise
- Impossible to experiment & to make verification difficult

Basic Mechanism for Agent-Based Modeling

Gaming Simulation

- Target dynamical environments caused by players' decision changes
- Cope with randomness and unpredictable factors
- Explain case like backgrounds, lectures,...
- Debrief & discuss after game playing

Board Game

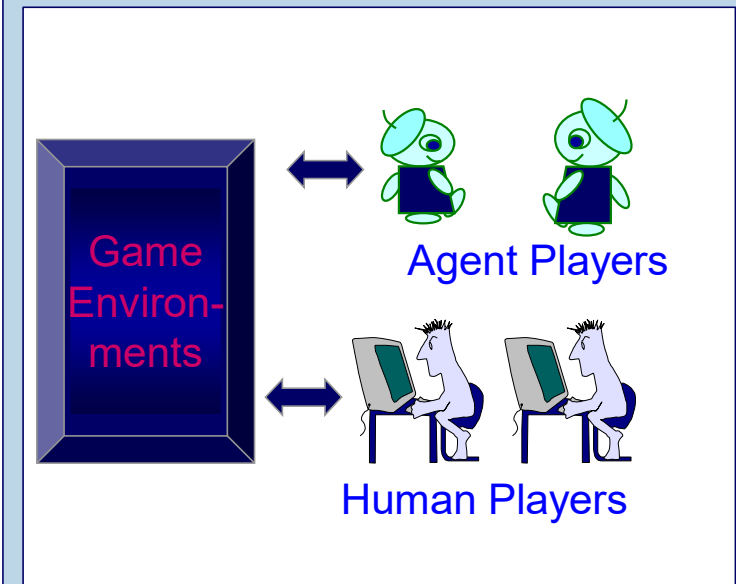

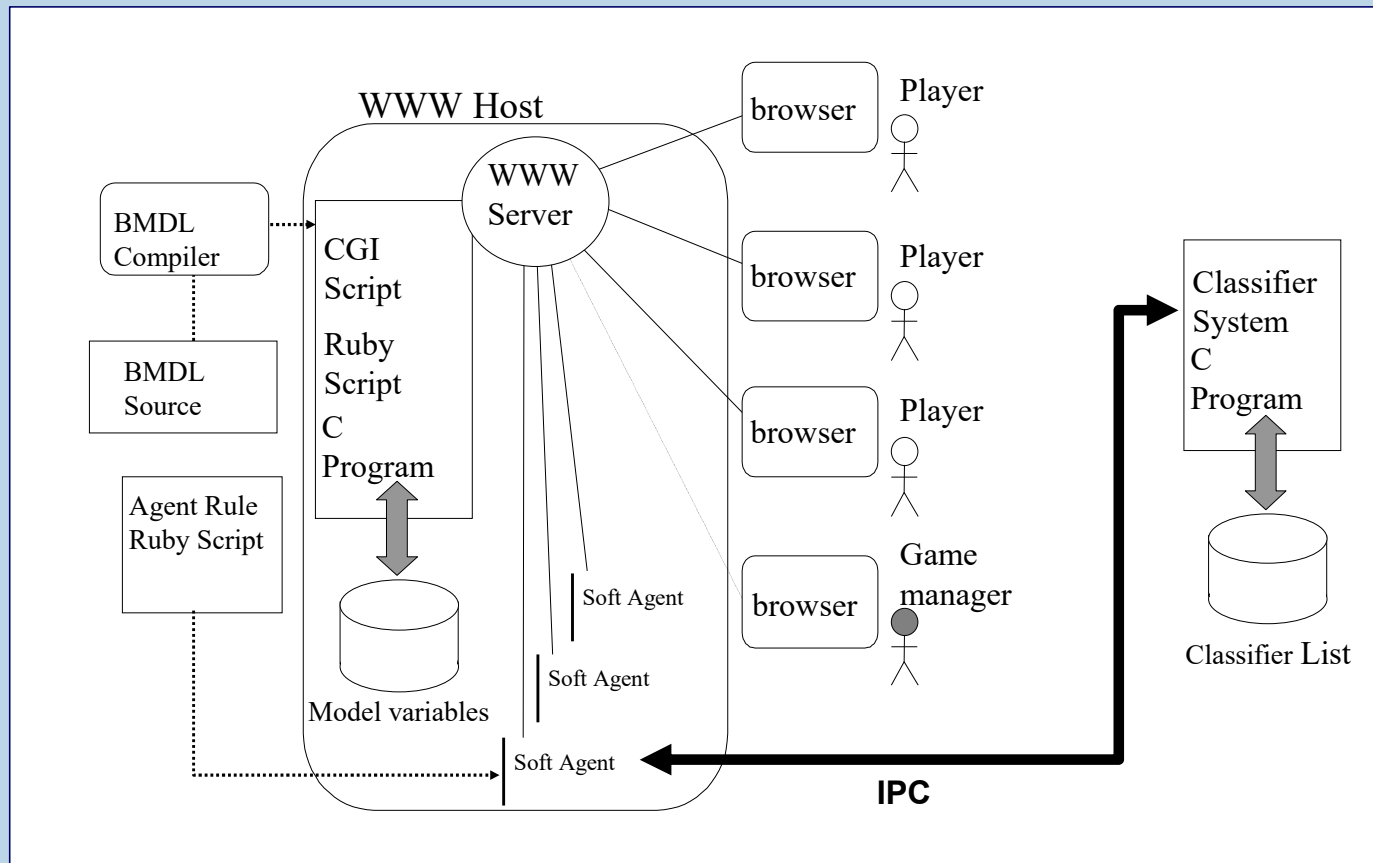

Computerized Gaming

Gaming Course

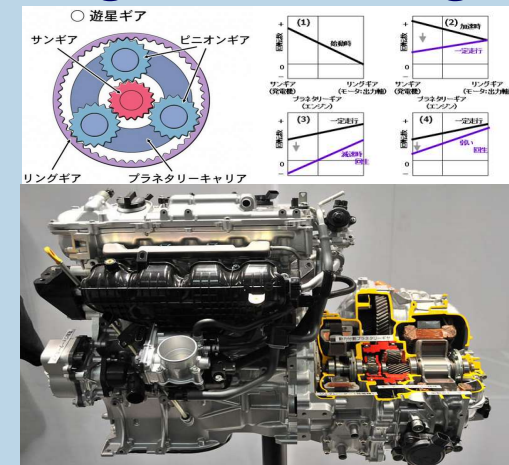

Architecture of BMDS with Agent Function and Learning Program

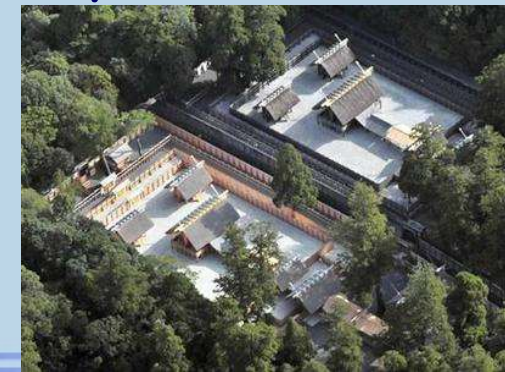

AI & Advanced ITs

- Seemingly Intelligent Systems :
 - If Complete Information: Algorithm Design
→ Information Science
 - If Incomplete Information:
Heuristics Implementation
→ Artificial Intelligence
- Artificial Intelligence :
 - Strong AI
 - Weak AI

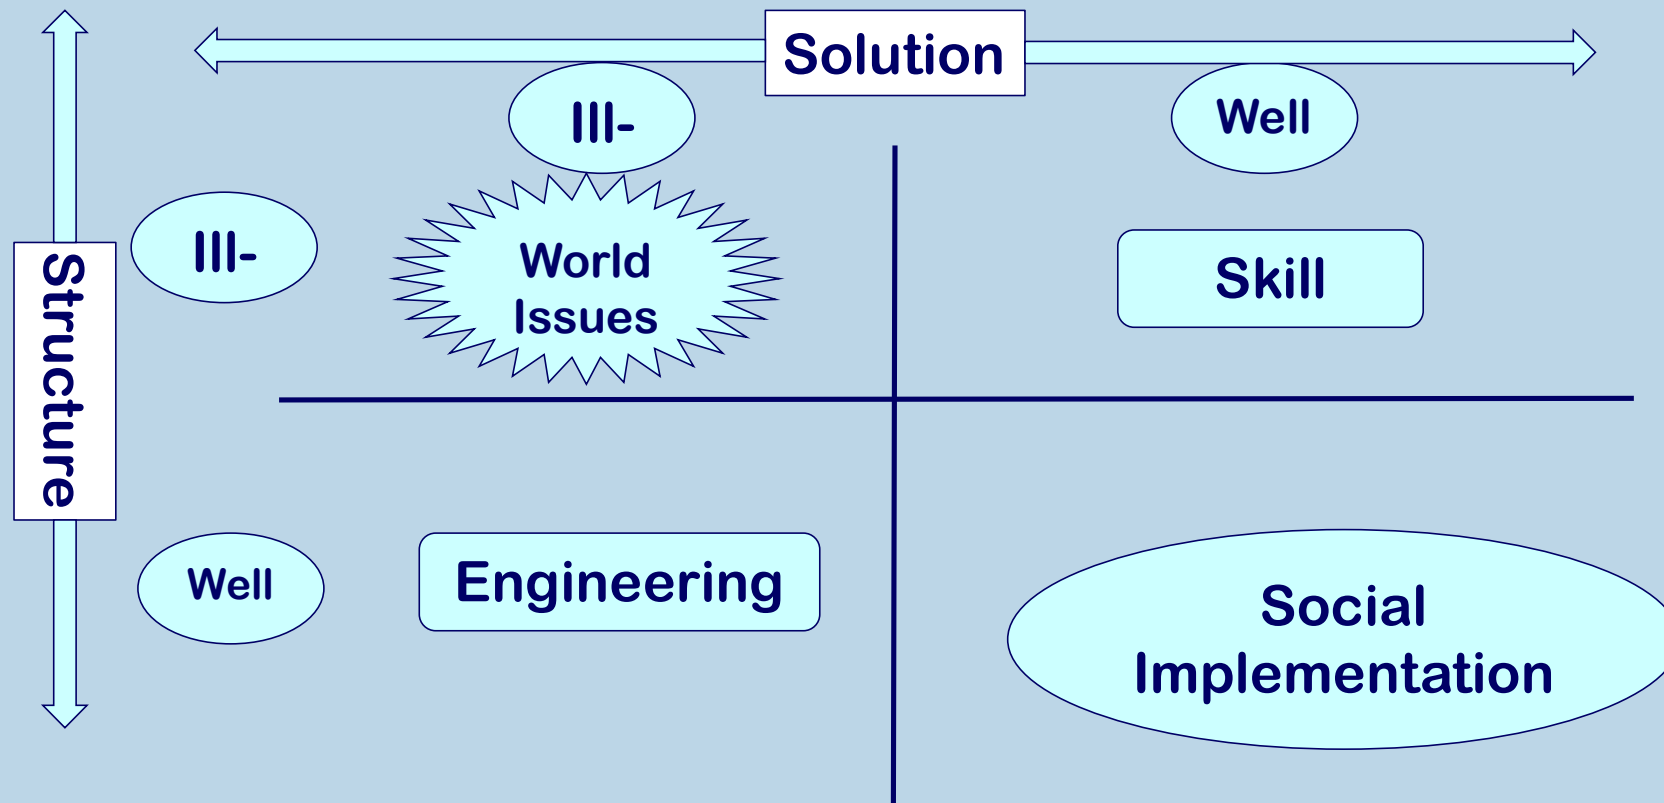

Algorithm Design

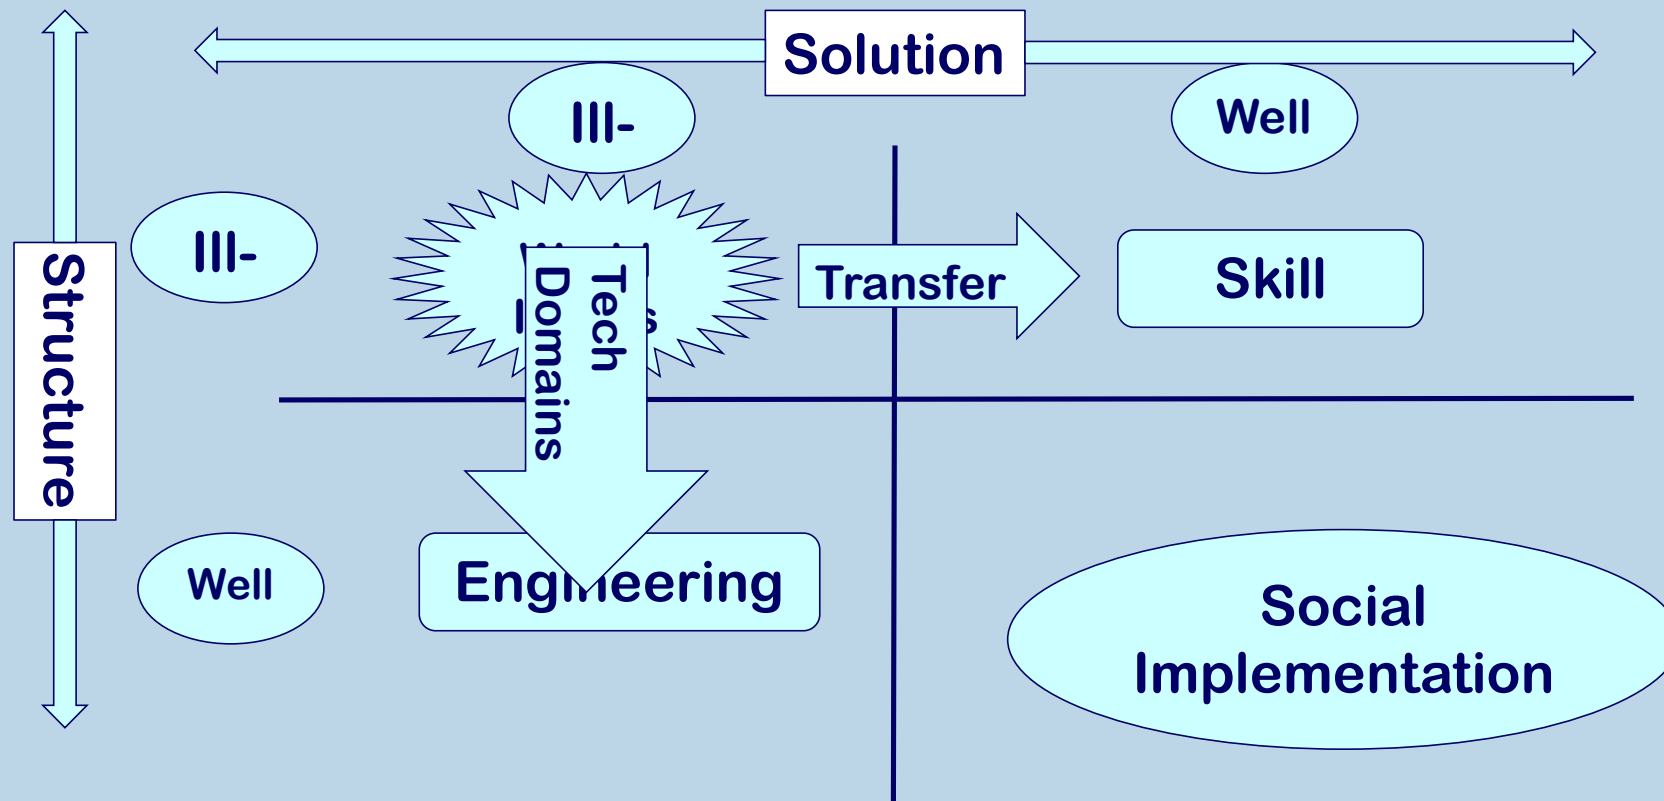

Expertise Transfer

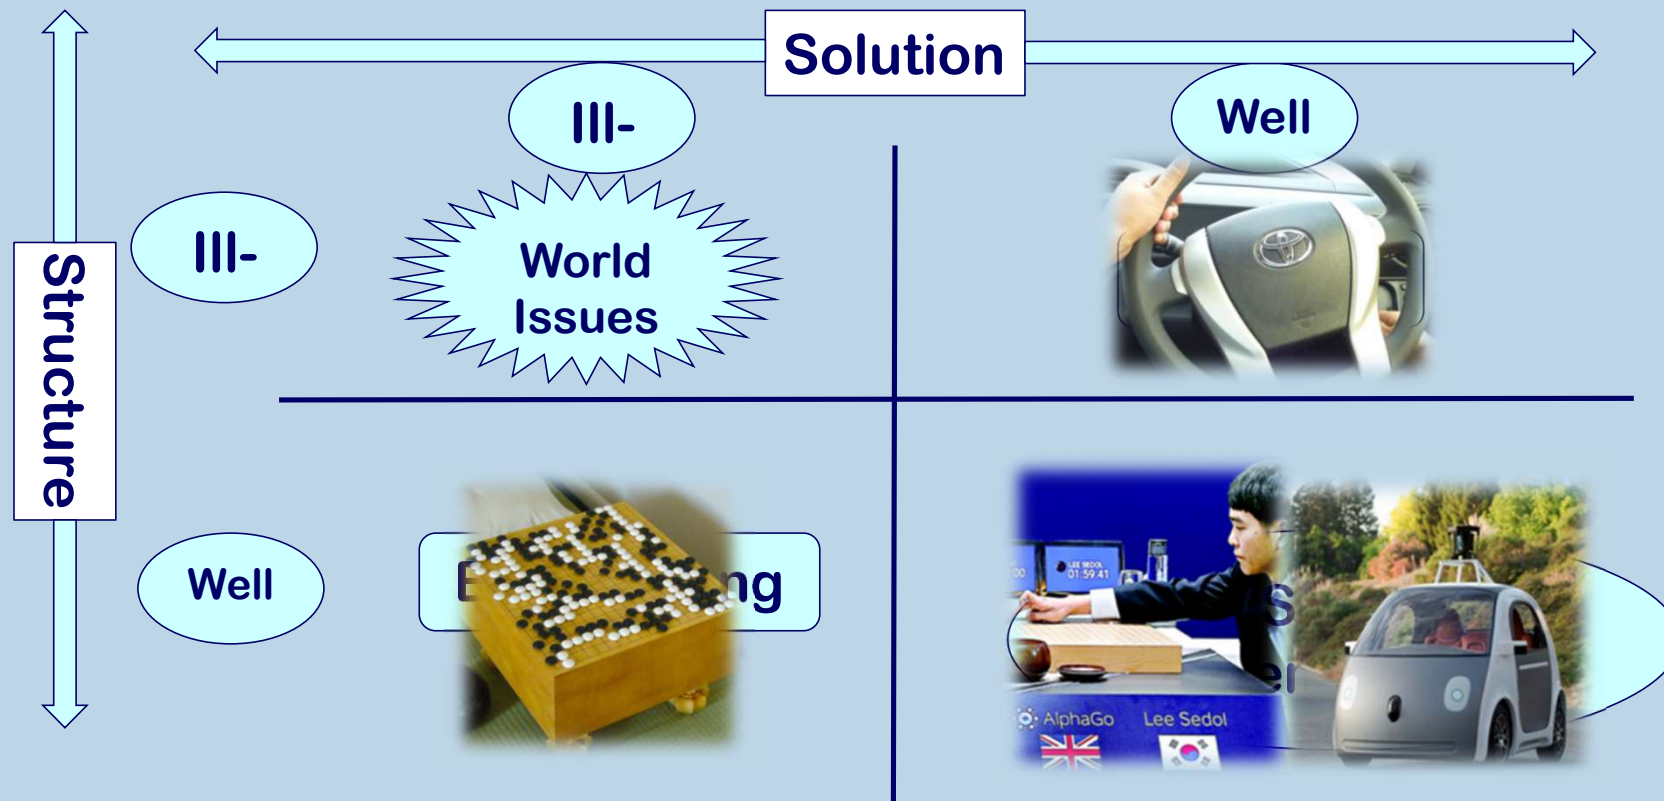

Solving Socio-Technical Problems

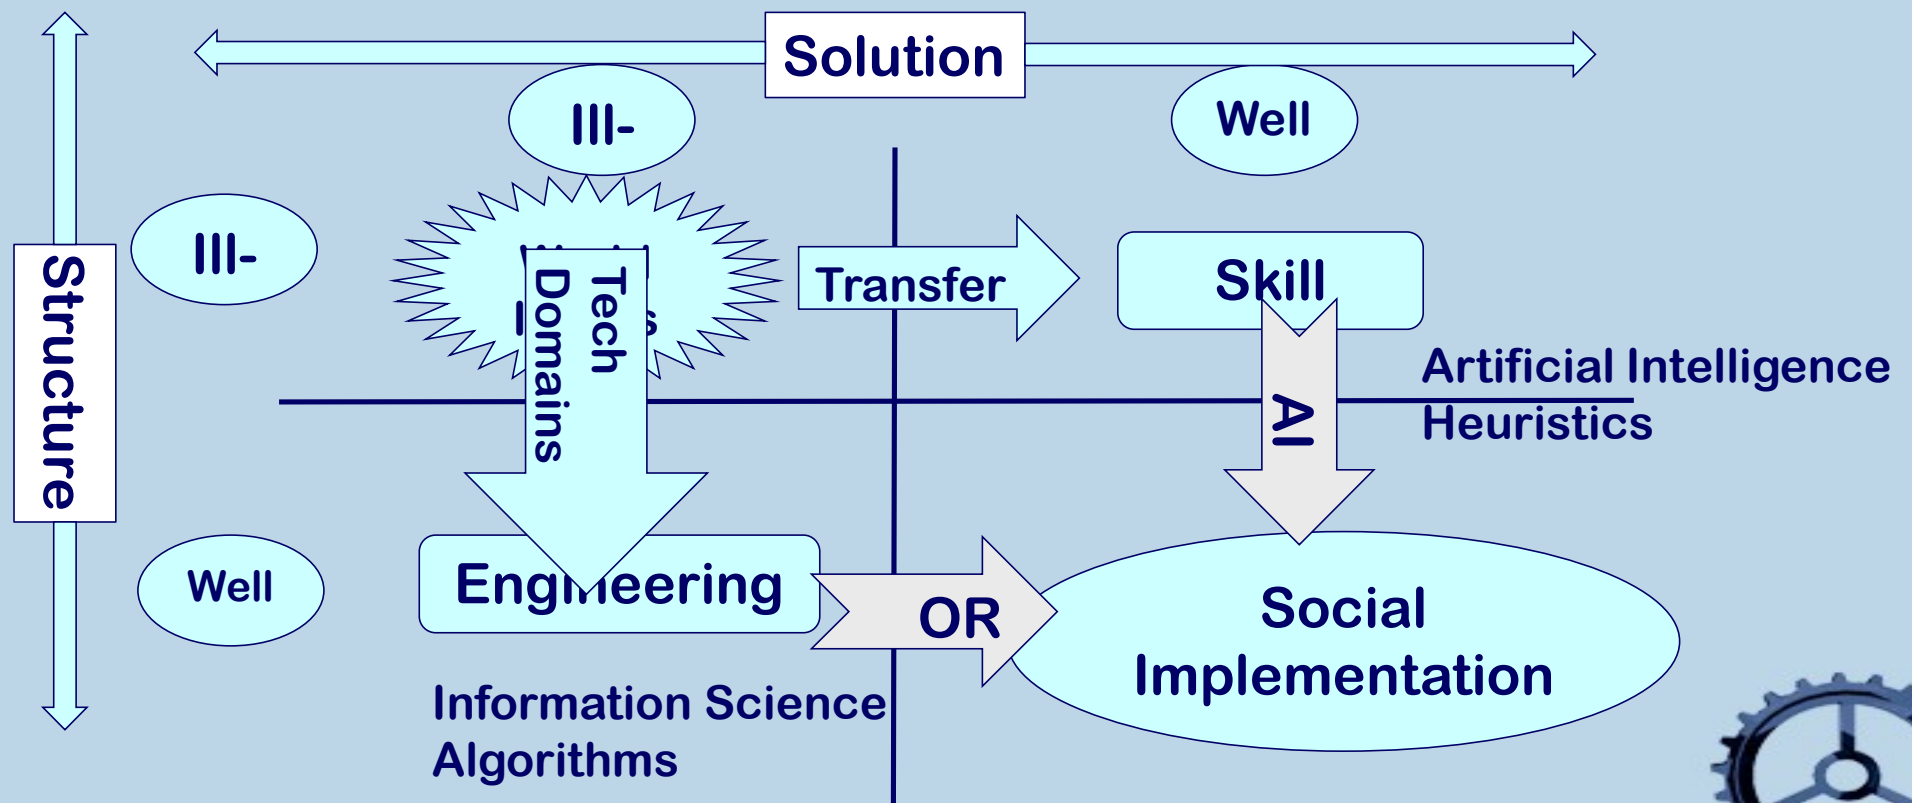

Solving Socio-Technical Problems

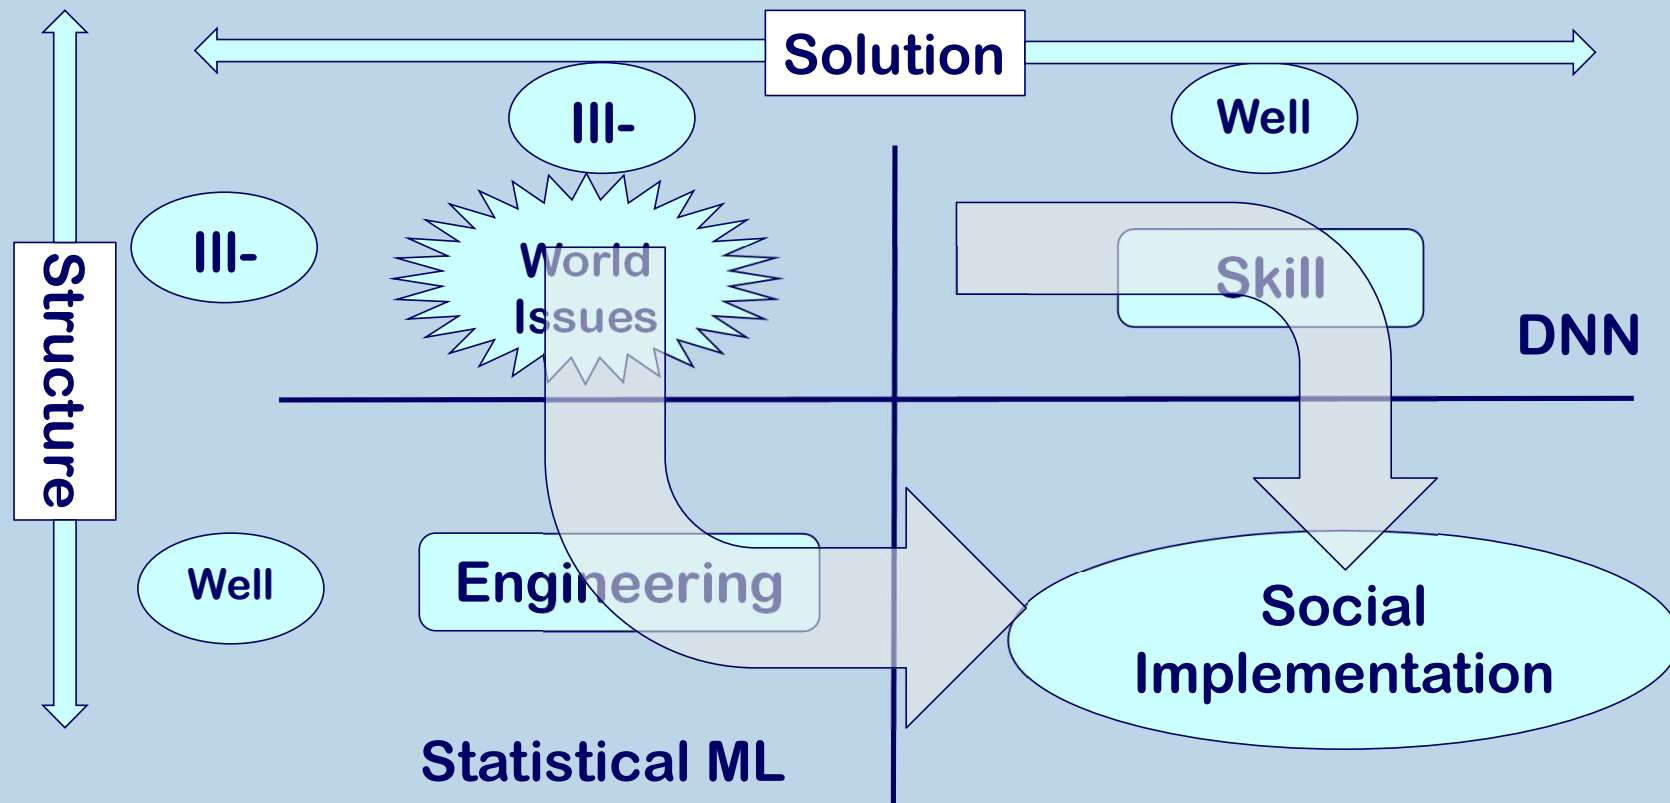

Solving Socio-Technical Problems

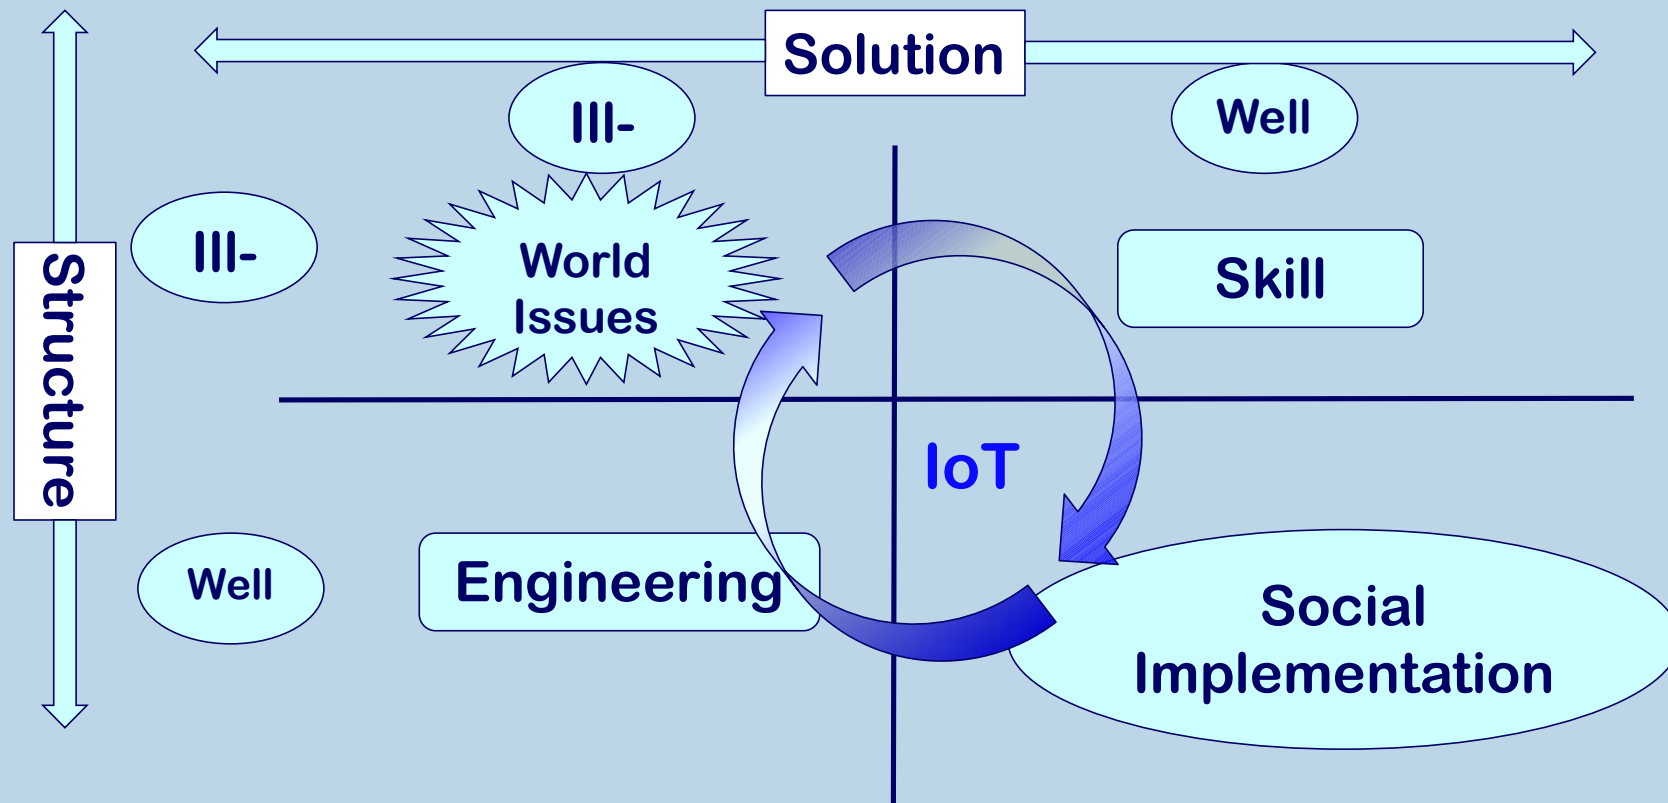

Solving Socio-Technical Problems

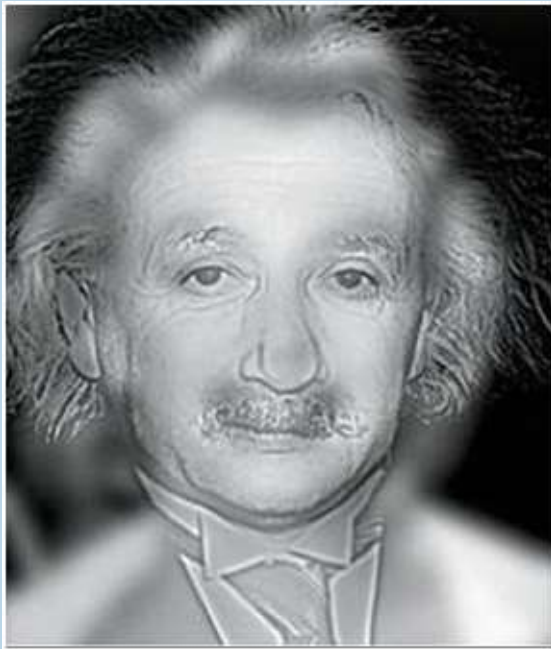

Solving Socio-Technical Problems

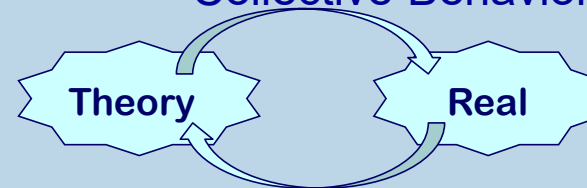

Solving Socio-Technical Problems

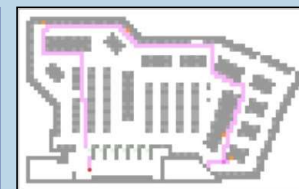

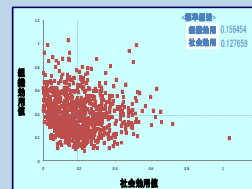

Two Faces of Research and Implementation of Socio-Technical Problems

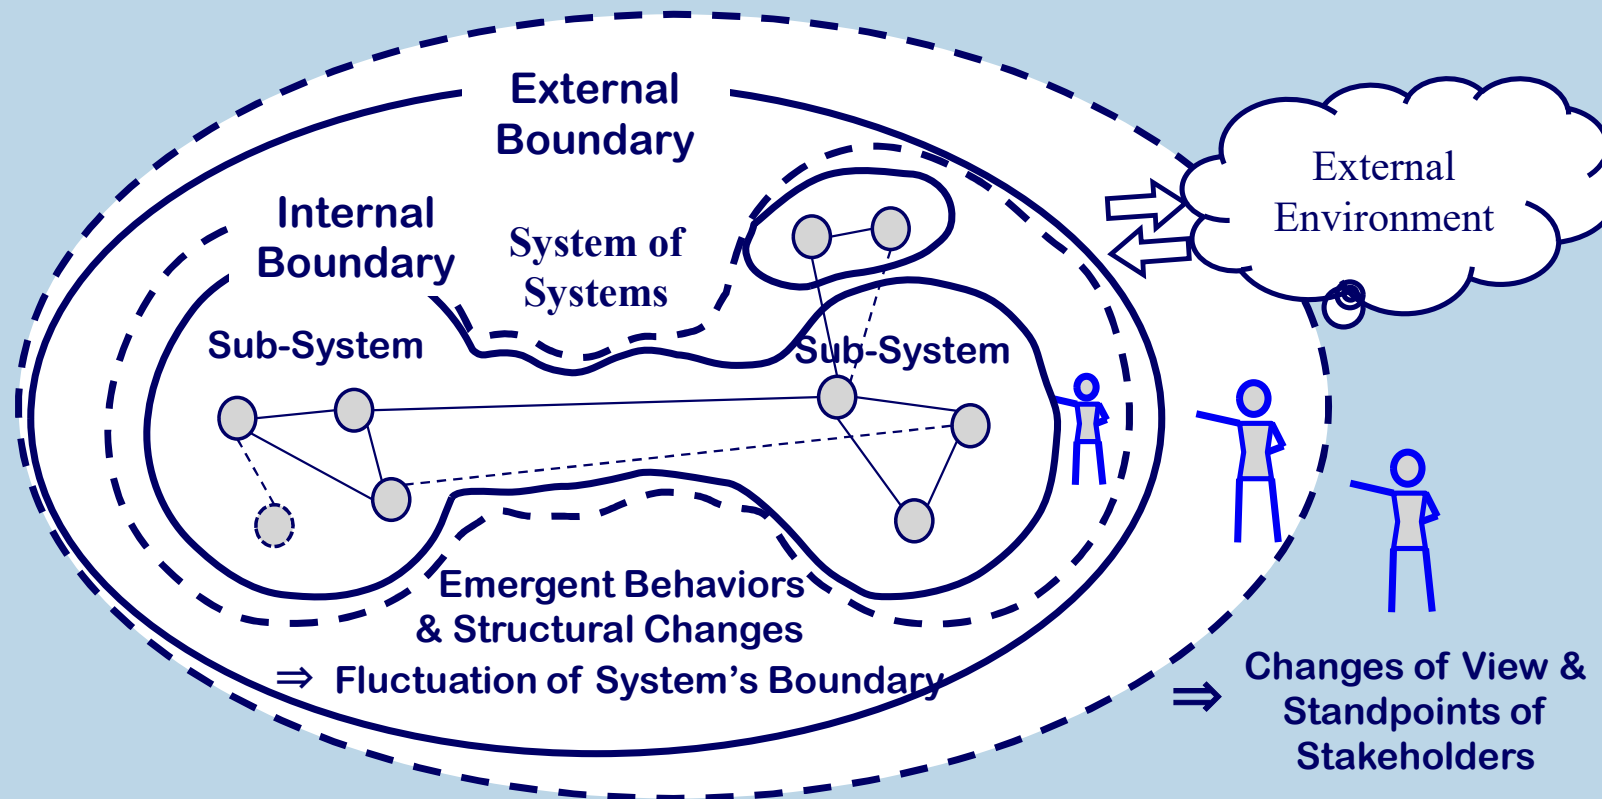

- Theoretical vs Real Issues
 - e.g., Game/Economics vs Collective Behaviors

- Physical , Social, and Technical Time Scale
 - e.g., Eternal, One Century, and One Decade
- Validation vs Accreditation

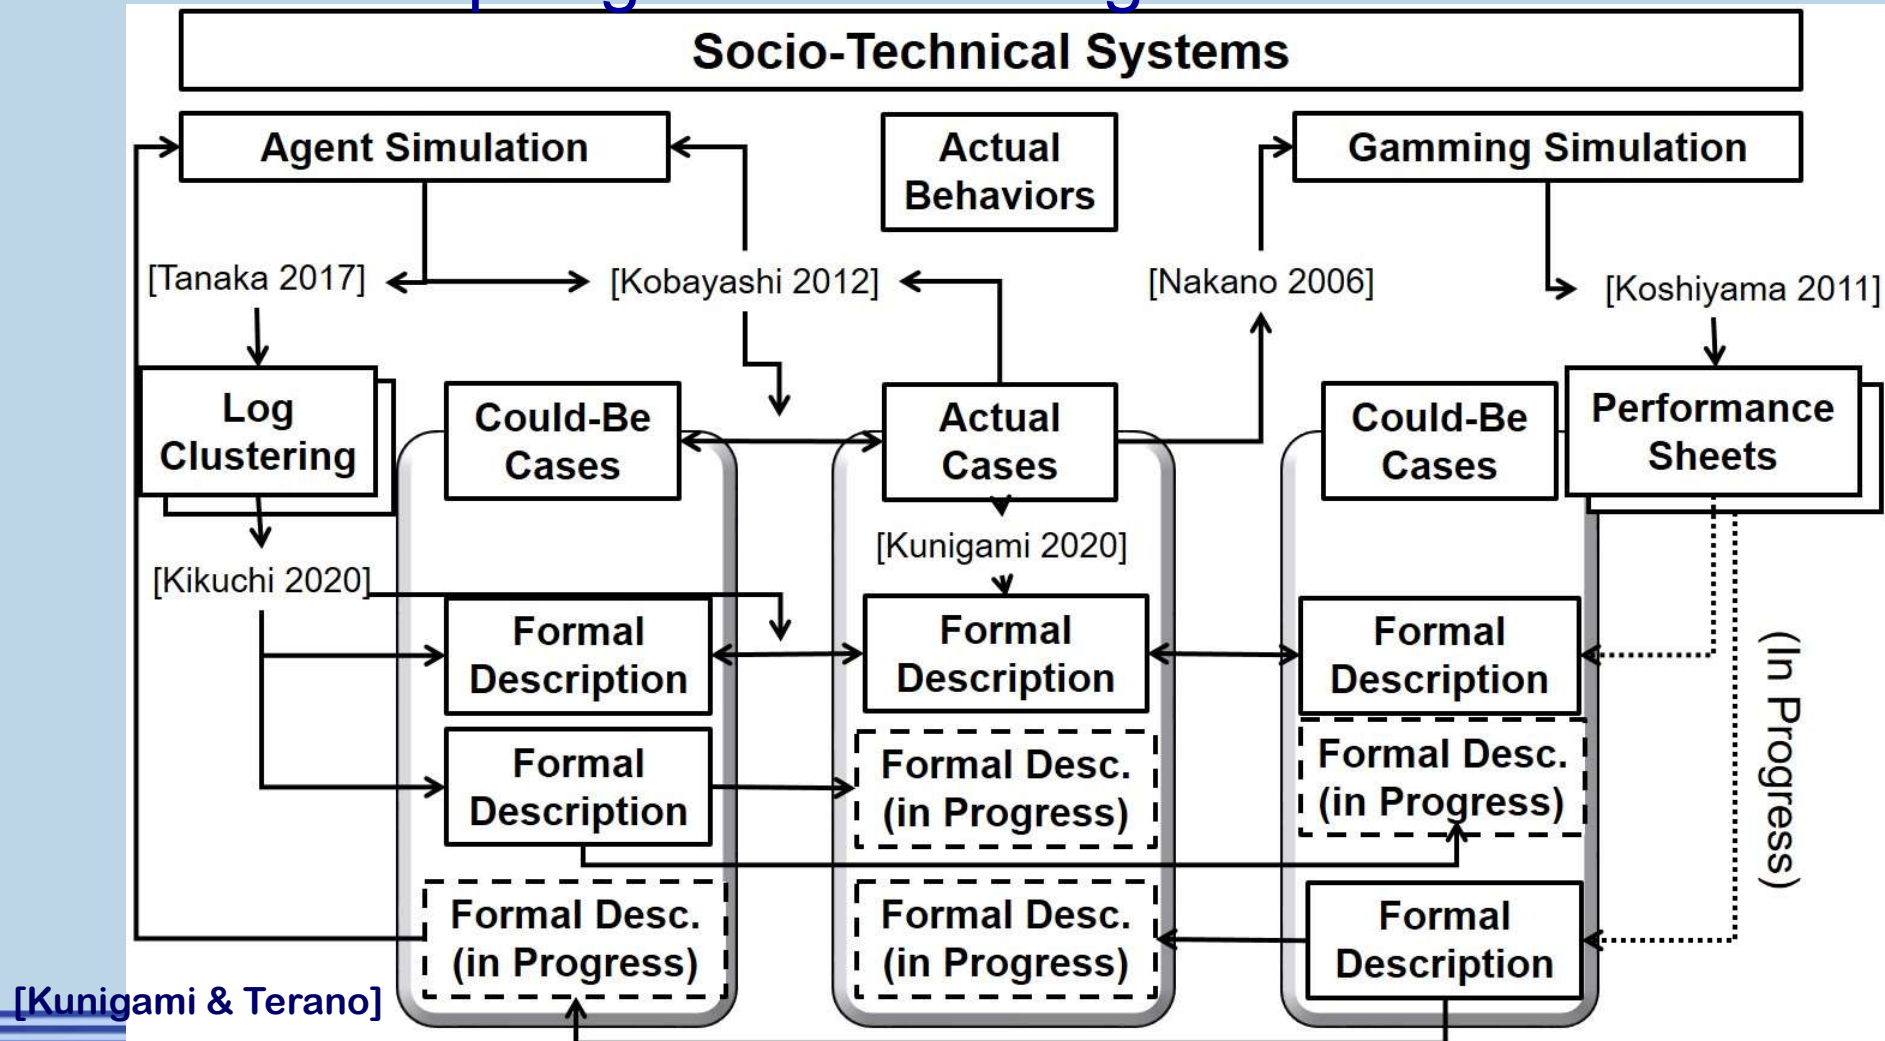

Fluctuation of Boundary and Stake-Holders of Socio-Technical Problems

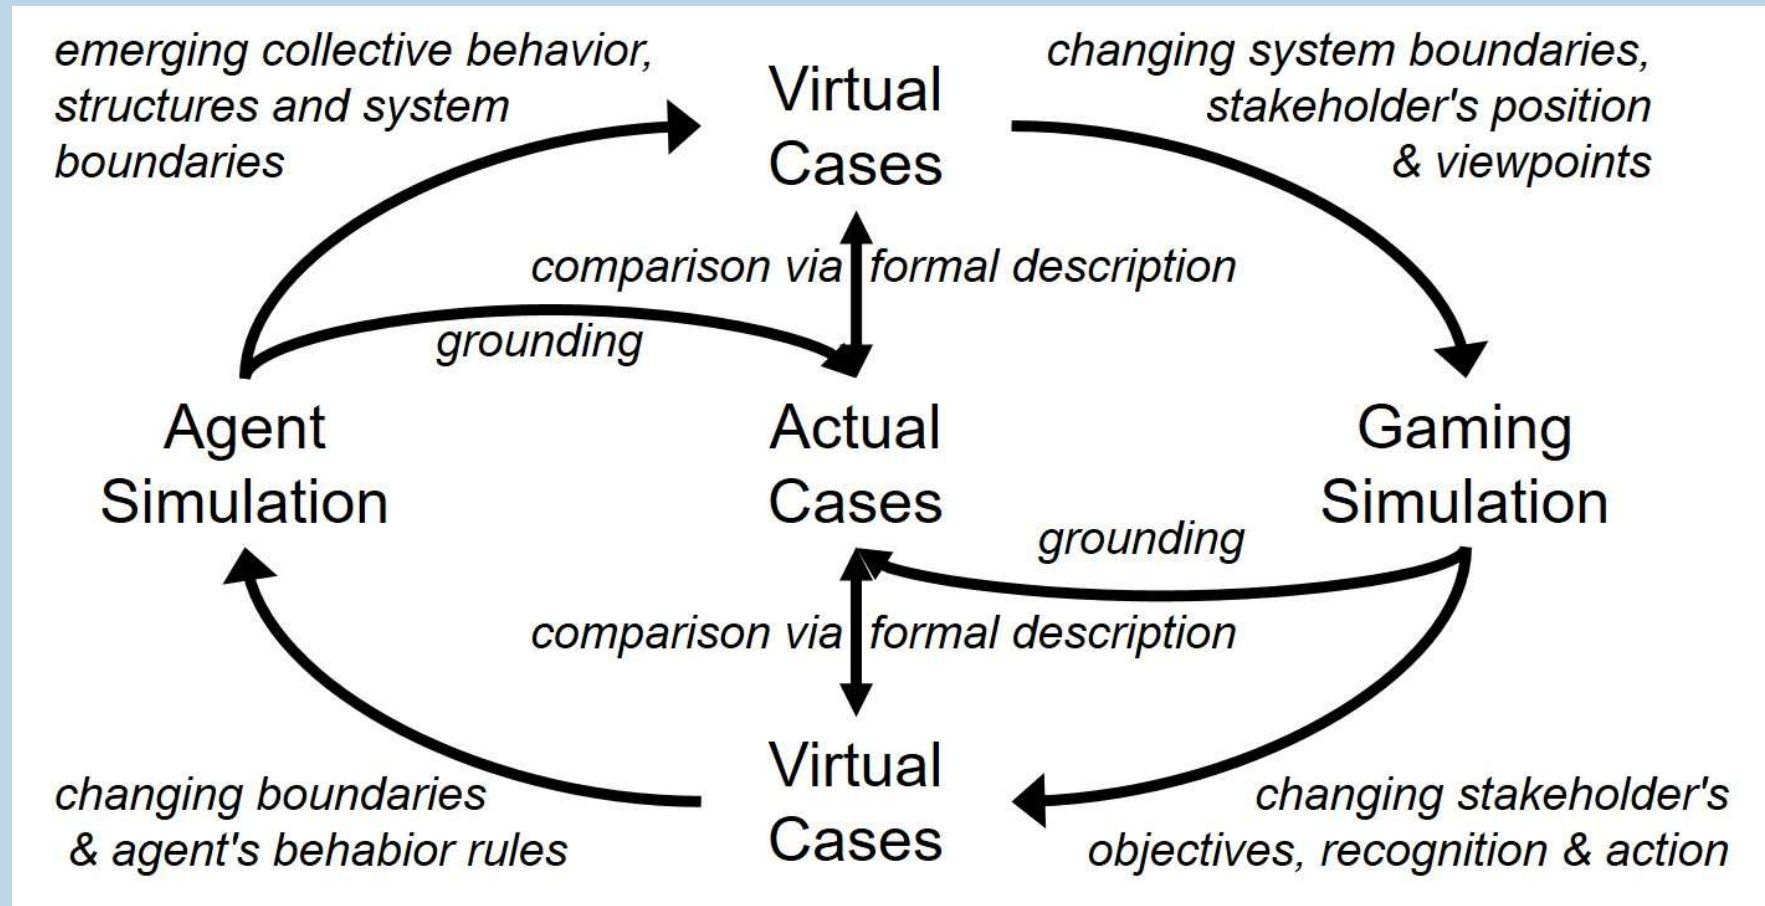

[Kunigami & Terano]

Relationship Agent - & Gaming-Simulation with Cases

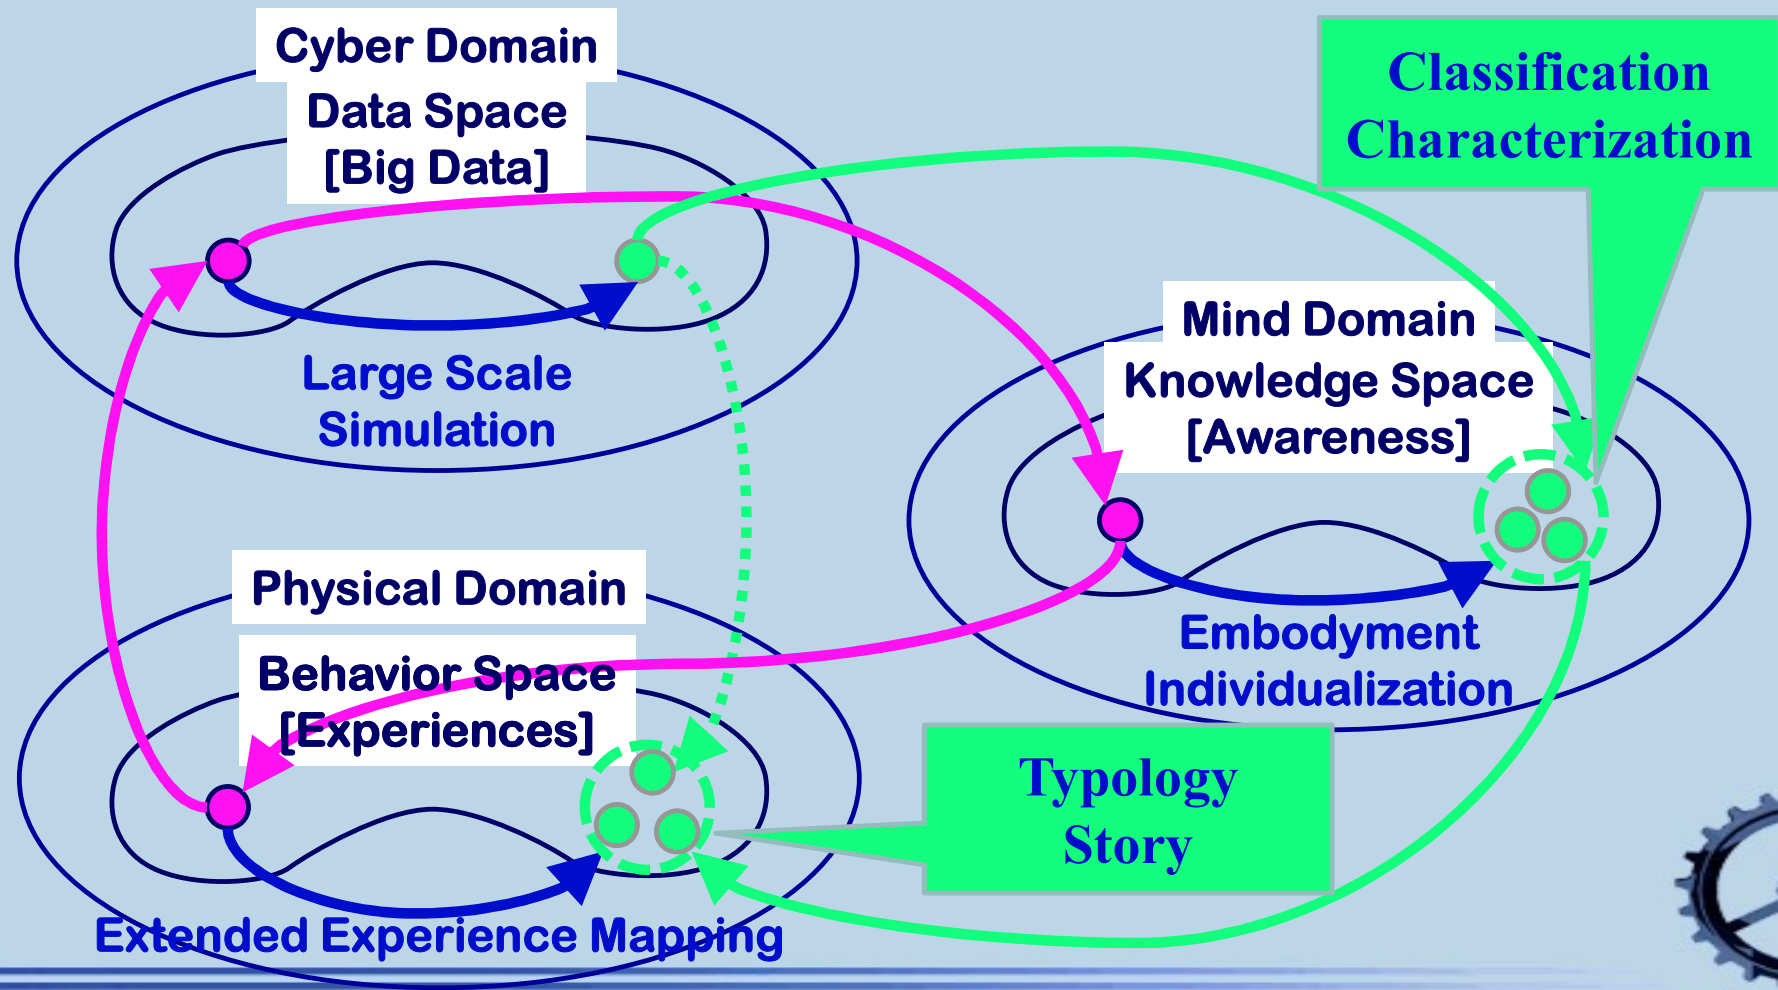

How to Integrate Cases, Games, & Agent Models

[Kunigami & Terano]

Society5.0 Concept is not Enough

Concluding Remarks

- Solving Socio-Technical Problem Matters
- Social System Implementation with AI/ML Technology is Immature
- Agent Modeling and Gaming Simulation with the Human-in-the-Loop is Essential in the Implementation
- Concepts of Society 5.0 are not Enough
- Agent Modeling, Gaming Modeling, Cases, and Participatory Approach will Make the Future!
